## **Methods**

This study uses surveys and interviews to gather broad and in-depth data on student engagement and educational improvements, aiming to support effective and equitable education.

## **Introduction**

Education fosters individual growth and societal progress. As society evolves, so do educational needs, driving research into teaching methods, student engagement, and policy improvements. By exploring these areas, researchers aim to enhance educational outcomes and ensure equitable learning opportunities for all.

## **Results**

The study found that effective teaching methods improve student engagement and critical thinking. Surveys indicated a strong link between active learning and outcomes, while interviews underscored the need for more resources and flexible policies to support diverse learners.

## **Conclusion**

The study concludes that effective teaching methods and supportive policies enhance student engagement and outcomes. Providing resources and flexible policies is essential for fostering critical thinking and ensuring equitable access to education.
